Origin of the Cottontail Ear Canal The earliest known usage of the term was from the English physician Samuel Lister, who was describing the condition called "cotton ear canal" to his patient, a man in his 70s with chronic sinusitis. It is possible that some readers may not have heard much about it in their respective family histories, so these earliest references are usually cited in the literature as a reliable source for later usage and understanding.. Since then, many studies and literature reviews have been published on the condition, and it has been found to have a wide range of neurological manifestations that are not apparent when the condition is left to the individual's imagination.
